

Deepak Purushotham

Senior Business Analyst | Business Transformation | Process Improvement | Agile Delivery

Reservoir, VIC 3073, Australia | 0416 175 001 | deepak_purushotham@outlook.com

PROFILE

Business Analyst with strong experience delivering business and technology transformation initiatives across large, complex enterprise environments. Experienced in stakeholder engagement, requirements elicitation, business process mapping, critical thinking, problem-solving, and translating complex business needs into clear functional and non-functional requirements that support scalable technology and operational outcomes. Skilled in facilitating workshops, solutioning discussions, documenting business requirements (BRD, FRD, user stories, acceptance criteria, use cases), and developing current and future state process models, persona scenarios, and solution artefacts to support enterprise technology initiatives and integration delivery. Strong experience working across the system development lifecycle (SDLC), collaborating with business stakeholders, project leadership, architects, developers, testers, security, and data teams to support solution validation, requirements traceability, testing, and change impact assessment. Strong communication, stakeholder engagement, influencing, and analytical capability with proven experience working with senior stakeholders, navigating ambiguity, and delivering high-quality outcomes across enterprise environments.

Australian Permanent Resident.

EMPLOYMENT HISTORY

Senior Business Analyst

June 2022 — Present

Ausnet, Wipro Technology, Melbourne, Australia

Delivered data transformation and integration initiatives supporting enterprise data platforms and global research systems.

Key Achievements and Responsibilities:

- Led business analysis activities across enterprise transformation and technology initiatives within a complex operational environment.
- Facilitated workshops and engagement sessions to gather, analyse, validate, and document business, functional, and non-functional requirements.
- Developed current and future state process maps, business process models, user stories, and use cases to support solution delivery and operational outcomes.
- Collaborated closely with Project Managers, architects, developers, testers, security, and business stakeholders to support solution validation, requirements traceability, and implementation readiness.
- Supported testing, UAT coordination, change impact assessment, and business readiness activities across enterprise initiatives.
- Contributed to Agile delivery, stakeholder consultation, and continuous improvement while supporting decision-making and operational improvements.
- Applied continuous learning to adapt to evolving business and technology requirements.
- Delivered 30–35% cost savings by optimising enterprise data sourcing and integration models.

Project Leader & Data Business Analyst

April 2020 — May 2022

Citi Group, Wipro Technology, Melbourne, Australia

Provide business analysis leadership across operational and technology teams supporting enterprise digital transformation initiatives in the energy sector.

Key Achievements and Responsibilities:

- Led end-to-end business analysis and delivery activities supporting enterprise transformation and system integration initiatives.
- Conducted workshops and stakeholder sessions to gather, analyse, and document business, functional, and non-functional requirements.
- Developed process flows, use cases, functional specifications, and solution artefacts to support technology delivery.
- Collaborated with business and technical teams to integration delivery, requirements traceability, solution validation, and operational improvements.
- Supported Agile delivery through backlog refinement, sprint planning, retrospectives, testing, and UAT coordination.
- Delivered measurable operational improvements and cost savings through process optimisation initiatives.

Key Projects:

Data Cost Optimization

- Project Delivery Lead responsible for planning, organizing, analysing, and communicating program progress.
- Negotiated new agreements and restructured data licensing models, achieving 30-35% savings on licensing costs, thereby allocating more resources.
- Collaborated with data teams to ensure the new model met all data needs without compromising data quality or accessibility.

API and JSON Utilization for Data Integration:

- Spearheaded the integration of global research data into the biometrics database using JSON formatting, achieving a 30-35% savings on licensing costs through efficient data handling and transfer.
- Led the design and development of RESTful APIs to integrate various healthcare data systems, ensuring seamless data exchange and interoperability.
- Created detailed API documentation and specifications, outlining endpoints, request/response formats, authentication methods, and error handling procedures.
- Collaborated with cross-functional teams, including developers, analysts, and healthcare professionals, to define API requirements and use cases.
- Implemented version control for APIs, managing updates and backward compatibility to ensure consistent service delivery.

Use Case Analysis:

- Conducted comprehensive use case analysis to understand and document the specific needs and workflows of healthcare practitioners and researchers.
- Identified key data integration points and developed solutions to optimize data flow and enhance user experience.
- Facilitated workshops and meetings with stakeholders to gather requirements, validate use cases, and ensure alignment with business goals.

Agile Project Management:

- Responsible for creating user stories, maintaining backlog, assisting in delivery/release forecasts, backlog grooming, reviewing Swagger documentation, conducting development walkthroughs, sprint planning, and UAT signoffs.
- Developed and maintained data models and schemas to support API integration and data analytics initiatives.

Technology Analyst (Data and API)

May 2018 — Feb 2020

NBN, Wipro Technology, Melbourne, Australia

- Developed robust application interfaces using APIs and JSON.
- Implemented data exchange protocols to ensure seamless communication between business applications and backend systems.
- Collaborated with backend developers to integrate APIs effectively.
- Engaged with customers to gather and understand business goals.

EDUCATION

Master of Business Information Management and Systems

La Trobe University, Melbourne, Australia

Feb 2016 — Jan 2018

Bachelor of Engineering in Electrical and Electronics

Anna University, Chennai, India

July 2009 — Aug 2013

SKILLS

Core Business Analysis:

Business Analysis, Requirements Elicitation, Stakeholder Engagement, Business Process Mapping, Current & Future State Process Mapping, Functional Requirements, Non-Functional Requirements, Use Cases, Persona Scenarios, BPMN, Requirements Traceability, Solution Validation, Change Impact Assessment, UAT Coordination, SDLC, Agile Delivery, Problem-Solving, Critical Thinking, Workshop Facilitation, Communication.

Industry Experience:

Energy & Utilities, Regulatory Programs, Technology Delivery, Process Improvement.

Enterprise Delivery:

Business Transformation, Technology Delivery, System Integration, Stakeholder Consultation, Continuous Improvement.
